Profile SUMMARY

Data Analyst skilled in SQL, Python, Excel, and Business Intelligence tools with hands-on experience processing 65K+ records and architecting interactive dashboards for healthcare and quick-commerce domains. Proficient in automated ETL, exploratory data analysis (EDA), KPI engineering, and structural data modeling using Power BI, DAX, and Power Query to drive data-centric business decisions.

Technical Skills

Languages: SQL (MySQL, PostgreSQL), Python

BI & Visualization: Microsoft Power BI, Power Query, DAX, Microsoft Excel (Advanced, Pivot Tables)

Libraries & Frameworks: Pandas, NumPy, Matplotlib, Seaborn

Core Methodologies: Data Analysis, Exploratory Data Analysis (EDA), Data Cleaning, Data Modeling, KPI Reporting, Dashboard Development, Statistical Analysis

Professional Experience

Maharashtra Remote Sensing Application Centre (MRSAC)

Student Intern

Nagpur, India

Dec 2025 – May 2026

- Collected, cleaned, and transformed real-time traffic datasets from TomTom Live Traffic APIs, improving data quality for regional traffic and incident analysis.
- Automated traffic data analysis using Google Gemini AI to extract actionable insights, identify congestion patterns, and support predictive analytics for road safety planning.
- Designed interactive geospatial dashboards and automated reporting solutions to visualize traffic trends, hotspot analysis, and key performance metrics for operational decision-making.

Key Analytics Projects

HealthMetrics – Healthcare Analytics Dashboard | **Power BI, SQL, DAX, Power Query**

- Developed an end-to-end Power BI analytics dashboard tracking hospital operations, inpatient admissions, revenue trends, and satisfaction scores across 5,000+ clinical records.
- Architected data transformation pipelines across 15+ relational database tables using SQL and Power Query to ensure data integrity and clean reporting layers.
- Formulated 12+ custom DAX measures and KPI tiles to monitor critical operational matrices including bed occupancy thresholds, billing variations, and doctor efficiency metrics.

Blinkit Analysis Dashboard | **Power BI, Excel, DAX, Power Query**

- Built a comprehensive Quick-Commerce business dashboard assessing 10,000+ transactional records to monitor fulfillment timelines, customer retention, and regional inventory health.
- Engineered reliable data modeling setups by merging and purifying 10+ operational data tables to establish cross-functional metrics consistency.
- Programmed 15+ descriptive DAX calculations (Average Order Value, Campaign ROI, and Delivery Success Rates) to surface regional conversion performance and mitigate product supply drop-offs.

Education

GH Raison College of Engineering and Management

Bachelor of Technology in Computer Science and Engineering (CGPA: 6.39)

Nagpur, India

2022 – 2026

Guru Nanak Public H/S School

Higher Secondary Certificate (12th Maharashtra State Board – 81.67%)

Ballarpur, India

2021 – 2022

Dilasagram Convent High School

Secondary School Certificate (10th CBSE – 80.8%)

Ballarpur, India

2019 – 2020

Certifications

Complete Data Analyst Bootcamp From Basics To Advanced (Udemy) – Covered Python, SQL, Power BI, Advanced Excel, Statistics, and Exploratory Data Analysis via real-world dataset deployments.

Python: Master Programming and Development (Udemy) – Focused on object-oriented programming, data handling pipelines, automation scripts, and API interactions.
